This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Claims 1-5 (Canceled).

Claim 6 (Currently Amended): An image pick-up device ~~or an image capturing device~~ for generating image data that is related to an image processing control parameter designating an image processing condition for image data, <u>said image processing condition being a condition for an output device that will output said image data</u>, said image pick-up device ~~or said image capturing device~~ comprising:

      means for generating said image data;

      means for designating an imaging condition when said means for generating generates said image data;

      means for storing a plurality of combinations, each combination composed of said imaging condition and a plurality of said image processing control parameters;

      means for acquiring from said means for storing ~~said~~ <u>a</u> plurality of image processing control parameters for ~~said~~ <u>a</u> designated imaging condition; and

      means for relating ~~said~~ generated image data to ~~said~~ <u>a</u> plurality of acquired image processing control parameters, and outputting the related image data.

Claim 7 (Currently Amended): An image pick-up device ~~or an image capturing device~~ according to claim 6, further comprising:

      means for modifying a value of any image processing control parameter among said plurality of acquired image processing control parameters.

Claim 8 (Canceled).

Claim 9 (Currently Amended): An image pick-up device ~~or an image capturing device~~ according to claim 6, wherein said image processing control parameters include at least parameters relating to color space, gamma correction value, contrast, brightness, color balance, saturation, sharpness, color cast, and noise elimination.

Claims 10-31 (Canceled).

Claim 32 (Currently Amended): An image pick-up device ~~or an image capturing device~~ for generating image data that is related to image processing control information designating an image processing condition for image data, <u>said image processing condition being a condition for an output device that will output said image data</u>, said image pick-up device ~~or said image capturing device~~ comprising:

      means for generating said image data;

      means for designating an imaging condition when said means for generating generates said image data;

      means for storing a plurality of sets of said image processing control information, the information specifying an image processing control parameter set to be used for image processing of said image data, under said imaging condition;

      means for acquiring from said means for storing ~~said~~ image processing control information for ~~said~~ <u>a</u> designated imaging condition; and

      means for relating ~~said~~ generated image data to ~~said~~ acquired image processing control information, and outputting the related image data.

Claim 33 (Canceled).

Claim 34 (Currently Amended): An image pick-up device ~~or an image capturing device~~ according to claim 32, wherein said image processing control parameters include at least parameters relating to color space, gamma correction value, contrast, brightness, color balance, saturation, sharpness, color cast, and noise elimination.

Claims 35-61 (Canceled).
